

## Installation Steps:-

Step1:- Install the extension.

Step2:- after installation place the below code

```
<!-- Code to get Customer custom tab starts ---->
<?php
    $tabId = '';
    if (isset($tabId)) {
        $tabId = $this->getRequest()->getParam('tabId');
    }
    $customerData = Mage::getSingleton('customer/session')->getCustomer();
    $customerId = $customerData->getId();
    $resource = Mage::getSingleton('core/resource');
    $readConnection = $resource->getConnection('core_read');
    $query = "SELECT * FROM customer_custom_tab where customer_id = $customerId";
    $tabData = $readConnection->fetchAll($query);
    $baseurl = Mage::getBaseUrl();
    if (!empty($tabData)) {
        foreach ($tabData as $tabKey => $tabVal) {
            ?>
                <li>
                    <a href="<?=$baseurl."mymodule_customerpage/index/index?tabId=".$tabVal['tab_id'] ?>">
                        <?php if ($tabId == $tabVal['tab_id']) { ?
                        <strong><?php echo
                        strtoupper($tabVal['tab_name']); ?></strong>
                        <?php } else {
                        echo
                        strtoupper($tabVal['tab_name']);
                        }
                        ?>
                    </a>
                </li>
            <?php
            }
        }
    }
    ?>
<!-- Code to get Customer custom tab end ---->
```

under

“yourprojectdir/app/design/frontend/rwd/default/template/customer/account/navigation.phtml” file.

Note:- Paste this code just before the closing of “ul” tag.
